SUMMARY

Dedicated individual pursuing an Associate's Degree in General Studies at FGCU, concurrently participating in a Database Application and Development program at Lorenzo Walker Technical College. Possesses a strong passion for technology and a solid foundation in coding, including JavaScript, C#, HTML, and CSS. Proficient problem solver with experience in various projects, such as store pages, Windows Form applications, and console-based forms. Committed to continuous learning and personal growth.

SKILLS

Problem-Solving

C#

JavaScript

Object Oriented Programming

GIT

PERSONAL PROJECTS

Webshop

- A full front end Webshop using Tailwind, Vanilla CSS, Html and JavaScript, with the ability to log in as an admin and add products to appear in the shop, which are created dynamically with a style that fits the web page.

Console-Based Forms

- Created console based forms that ask the user for inputs and uses the inputs for things like mathematical formulas or simple word concatenation.

Cake shop

- Windows form application made using C# that allowed customers to choose what cakes or drinks they wanted, as well as how many, and showed their receipt and total when the total button is clicked.
